Text:

...software packages (produced by companies mentioned previously) can handle international compensation. Or, the organization may want to develop spreadsheets to track compensation of employees by **country** and **currency**. A workaround may be needed to convert current salary information back to U.S. equivalents.

Often, employees with international assignments receive special allowances for relocation...

...short-term and longterm absence policies provided by many U.S. organizations—a situation that will complicate global reporting.

Because

other countries do not have **categories** such as sick leave, personal leave or family and medical leave, global companies will need a standard definition of what constitutes time off, and when...and cultural implications for each country where the company operates?

What are the primary business needs in each country?

How extensive is the need for **summaries** of global **information**?

What unique requirements does the global enterprise have; for example, tracking overseas assignments, succession planning, training and development? What about additional family information such as...

...country and the specific demands of the foreign business operations.
mZ

Specification: ...B1

The present invention relates to electronic rights and transaction management. More particularly, the invention relates to automated systems and methods for efficiently matching, selecting, **categorizing** and/or classifying and narrowcasting in a distributed

electronic rights management environment. For example, the invention may provide electronic computer based systems and methods for... ...This matching, classifying, and/or selecting and narrowcasting is based, at least in part, on elements of rights management information and one or more other **categories** of information, wherein such information is used for efficient, trusted event management assuring the execution of one or more controls related to, including, for example... ...in this example can provide a variety of different outputs including, for example, some or all of the following:

matching information 920;

class hierarchies 962;

category definitions 922 and class definitions 970;

classified objects 908C;

audit records 964 indicating the results of classification, matching, and or selecting processes;

reports 966 indicating...Classification Utility System 900

The next section of the specification describes some example steps performed by the matching and classification utility 900.

Example Steps to **Categorize** Objects and/or Users and/or Appliances

Figure 18 shows example steps to **categorize** objects, and Figure 19 shows example steps to **categorize** users 95 and/or appliances 100. The overall categorization steps in these examples are -- at this level -- similar to one another. The processes begin by... ...methods may be used (Figure 18, block 1848; Figure 19, block 1848'). Next, the process assigns objects and/or users and/or appliances to the **categories** developed by the classification method that has been applied (Figure 18, block 1849; Figure 19, block 1849'). Finally, the process stores the results in electronic... ...management processes actually performed with respect to particular users and/or particular objects. The information may be analyzed first to provide statistical and/or other **summary information**, or individual, more granular information may be provided. The composite record 1852 may also contain attributes of particular electronic appliance 100 installations. The particular example... ...of classification outputs produced by the Figure 21 process. In the Figure 22 example, information from several individuals has been used to create two example **categories** that reflect differing use profiles. More classes may have been defined than those example classes shown here. Users assigned to the same class have many...multiple audit records together for analysis (decision blocks 1820, 1822, Figure 45A), then the process proceeds to analyze those audit records together and create corresponding **summary** transaction **information** (Figure 45A, block 1824).

The process next determines whether it needs to produce aggregated audit statistics in order to perform the associated matching and/or... ...transactions, and other events on the World Wide Web are mainly driven today by following chains of hypertext links, using various search engines, and/or **indexes**, to say nothing of just plain luck and persistence, to find interesting and/or useful content and/or services. Time consuming and generally inefficient, these... ...at least one classification method, the matching and classification utility 900 may create at least one object class hierarchy, object class, object classification scheme, object **category** and/or object **category** scheme using at least some rights management information and assign at least one object to at least one **category** and/or class.

The matching and classification utility 900 takes the usage information and other rights management information received from the VDE nodes and/or other information sources and may create at least one **category** and may assign at least one node and/or user to a **category** and/or class. In Figure 47, the matching and classification utility 900 sends a VDE container 2002 to content provider 2010 with information showing the... ...such classification methods and procedures. The matching and classification utility 900 may create at least one object class hierarchy, object class, object classification scheme, object **category** and/or object **category** scheme using at least some rights management information and assign at least one object, item, and/or subscriber to at least one **category** and/or class.

Subsequent to receipt of the request and/or "subscribe" message from the customer 2053, the subject switch 2051 may query the matching...rights management information 2110 collected from DBN servers, for example, controls associated with the most frequently requested information, the matching and classification utility 900 creates **categories** of content (and/or services) and assigns DBN servers to one or more classes according to their specialization(s). The matching and classification utility 900 may create at least one class hierarchy, class, classification scheme, **category** and/or **category** scheme using at least some rights management information and assign at least DBN server and/or at least some information to at least one **category** and/or class.

For example, one DBN server may specialize in consumer sports information while another may specialize in legal information. DBN servers may specialize... ...that should be sent to one or more DBN servers 2104. Using this information, content providers 2102(1)-2012(n) then send content in these **categories** in VDE containers 2106 that match the **categories** of most frequently hit and/or consumed content on a DBN server 2104(1)-2104(n). (In another example, other information may be used as.... For instance, the matching and classification utility 900 sends a VDE container 2112(2) to content source 2102(1) with instructions to send content in **categories** 1,11, and 15 to DBN server 1 (2104(1)). This content may, in turn, be sent to one or more consumers in VDE containers... ...one DBN server.

Non-limiting example Figure 48 shows that the DBN 2100 may consist of video and/or audio content providers who send certain **categories** of video and/or audio content 2106 to DBN servers 2104(1) - 2104(n) based on the **categories** of content each server may

specialize in, which, in turn, may be determined at least in part on frequency of usage and/or other rights... ...classification, matching, and selection). The matching and classification utility 900 sends VDE containers 2112 to content sources indicating that they should send content in specific **categories** 2106 to specific DBN servers 2104. In turn, each DBN server 2104(1) - 2104(n) delivers video and/or audio in VDE containers to parties.... ...and/or services of interest to a user and/or node. The classification method may also create at least one class hierarchy, class, classification scheme, **category** and/or **category** scheme using at least some rights management information and assign at least one service and/or at least some content to at least one **category** and/or class.

Subsequently, a VDE container 2308 may be sent to a provider 2302 with information indicating at least one class of content, services.... ...come in part from the financial clearinghouse 200. The matching and classification utility 900 may also create at least one class hierarchy, class, classification scheme, **category** and/or **category** scheme using at least some rights management information and assign at least one service and/or at least some content to at least one **category** and/or class.

In one example, using at least some VDE rights management data, for example, whether certain information can be viewed by anyone, by any employee, or only by employees in certain job classes, such as "manager," the enterprise matching and classification utility 900 creates one or more **categories** and assigns one or more employees and/or VDE nodes to one or more topic **categories**. These **categories** may, for example, indicate content and/or service topics, subjects, and/or content areas of potential interest to each employee and/or groups of employees.... ...sends to at least one external content and/or service provider 2404 on Internet 2402 one or more VDE containers 2424 with information that indicates **categories** of interest. The content providers 2404 may themselves be specialized; in one example, a content provider may specialize in general business and financial news while.... ...more groups of employees. The information sent by the external provider is tailored to, or in some way responsive to the content and/or service **categories** requested by the enterprise matching and classification utility 900.

In another example, the enterprise matching and classification utility 900 itself may be a distributed commerce.... ...assignments to a rights and permissions clearinghouse 400. The matching and classification utility 900 may also create at least one class hierarchy, class, classification scheme, **category** and/or **category** scheme using at least some rights management information and assign at least one rule to at least one **category** and/or class.

An authorized first creator 2604 may send a VDE container 2617 to the rights and permissions clearinghouse 400 asking for rules in... ...n) to the matching and classification utility 900, and/or to a usage clearinghouse 300 who, in turn, sends at least some of the usage **information** (or a **summary** form of such **information**) to the matching and classification authority 900. Classes may also be defined using information gathered directly from the consumer 2818, perhaps under the control of VDE. The matching and classification utility 900 may also create at least one class hierarchy, class, classification scheme, **category** and/or **category** scheme using at least some rights

management information and assign at least one consumer, service, and/or at least some information to at least one **category** and/or class.

Example Figure 53 shows that a consumer 2802(1) has recently indicated a preference and/or interest in skiing, music, and flying... ...event and method (as described in "Ginter et al") for classifying equities related information, including, as non-limiting examples, current and historical price, volume, and **index** information, financial performance data for publicly held companies, forecasts, risk management information, options and futures, and the like. The classification method may also utilize rights... ...and/or expiration times and/or dates for rights management information. The classification method may also create at least one class hierarchy, class, classification scheme, **category** and/or **category** scheme using at least some rights management information and assign at least one element to at least one **category** and/or class.

In turn, using the VDE aware appliance 3004, the stock trader 3006 sends a smart object 3012 to at least one information...may also return methods for executing the trade. The matching and classification utility 900 may also create at least one class hierarchy, class, classification scheme, **category** and/or **category** scheme using at least some rights management information and assign at least some trading information to at least one **category** and/or class.

The example trader 3102 examines the recommendation and sends VDE containers 3118 (A, B) with trade methods and control sets to a... ...certain classes of hard goods, services, currency and financial instruments, and content. Travelers entering the United States, for example, are usually asked about currency (and **currency** equivalents) being brought into the **country** by the traveler. Children, for example, may be prohibited as a matter of law by governments from viewing content in the class "sexually explicit."

Another...the class "politics." The matching and classification utility 900 has also identified various subparts or subobjects and has classified each them into different classes or **categories**. In this example, the different classes represent different topic **categories**.

A user and/or other value chain participant may request only subobjects that have been **categorized** in one or more desired class(es). The desired subobjects may be packaged in a VDE container 4204 along with appropriate VDE controls for both... ...locates the object in one or more classes, non-limiting examples of which may include network address (URL), price, control set information, permission strings, subject **category**, title, and publisher.

In example step "1," object metadata 4302 is sent to a matching and classification utility 900 which (example step "2") may create...

Detailed Description:

...box" comprised of nodes located at every user (including VDE content container creators, other content providers, client users, and recipients of secure VDE content usage **information**) site. The nodes of said virtual black box normally include a secure subsystem having at least one secure hardware element (a semiconductor element or other hardware module for securely executing VDE control processes), said secure subsystems being distributed at nodes along a pathway of **information** storage, ...usage; as well as clearinghouse and other administrative and analysis activities employing content usage information.

VDE may be used to migrate most non-electronic, traditional **information** delivery models ('including entertainment, reference materials, catalog shopping, etc.) into an adequately secure digital distribution and usage management

- 36 -LE

-jaui am sluouiannboi S411i

uFellaD...of a

variety of different content segment types and employing both inexpensive 'exposed' host mass storage for maintaining detailed information in the form of encrypted **data** and maintaining **summary information** for security testing 'in highly secure special purpose VDE installation nonvolatile memory (if available).

support trusted chain of handling capabilities for pathways of distributed electronic...information (permissions record) control methods.

- 75

This iterative (or concurrent) multiple participant process occurs as a result of the submission and use

of secure, control **information** components
(executable code such as load modules and/or
methods, and/or associated data). These
components may be contributed independently by
secure communication between each... ...time, and/or session, for
- 77

accessing history information concerning previous
transactions, for reviewing financial information
such as budgets, expenditures (e.g. detailed and/or
summary) and usage analysis **information**, and (c)
VDE aware applications which, as a result of the use
of a VDE API and/or a transaction management (for
example, ROS based...VDE users, for example) are subject to
differing control information managing their use of
electronic information content. For example,
differing control models based on the **category** of a
user as a distributor of a VDE controlled content

- 90
object or an end-user of such content may result in
different budgets... ...payment to a customer or a transfer of a
large (e.a. over \$10,000) might be, by law,
automatically reported to the government). Such
summary and/or detailed **information** related to
taxable events and/or currency, and/or creditor
currency transfer, may be passed along a pathway of
reporting and/or payment to the...control information stored
remotely from the VDE installation that performed
the secure extraction such as at a remote server
location. As with the content control **information** for
most VDE managed content, features of the present
invention allows the content's control **information** to.

(...content
use; N different increment units (bytes, documents,
- 99

properties, paragraphs, images, etc.) and/or other
organizations of such electronic content; and/or (c)
different **categories** of user and/or VDE installation
types, such as client organizations, departments,
projects, networks, and/or individual users, etc.

This feature of the present 'invention...a VDE participant if they are
allowed to take such action. Rights of VDE participants may be
defined in relation to specific parties and/or **categories** of parties
and/or other groups of parties in a chain of handling of content
and/or content control information (e.g., permissions records).

Modifications...to evolve and transform VDE managed content and control information;

...browse, buy, view or sell virtually anything at anytime - both locally

and globally. From any Internet-connected computer, sellers can conveniently market items in the **local currency** to **regional** buyers or to a global audience. Buyers can access items available to them from across the world or search for things that only originate from...

...Additionally, the new auction sites provide users with easy access to a currency converter to help them quickly calculate foreign auction prices into their own **local currency**.

"Yahoo! continues to strive to be the single place on the Web that individuals need to go to find and connect with others who have..."

...September 1998, Yahoo! Auctions is a leading person-to-person interactive commerce marketplace offering convenient access to more than 2,000 diverse buying and selling **categories** such as: Arts & Entertainment, Toys & Games, Antiques & Collectibles, Electronics & Cameras, Computers, Sports, & Recreation, and Home & Garden. As an integral part of Yahoo! Auctions, Yahoo! Charity...

Specification: ...B1

The present invention relates to electronic rights and transaction management. More particularly, the invention relates to automated systems and methods for efficiently matching, selecting, **categorizing** and/or classifying and narrowcasting in a distributed electronic rights management environment. For example, the invention may provide electronic computer based systems and methods for... ...This matching, classifying, and/or selecting and narrowcasting is based, at least in part, on elements of rights management information and one or more other **categories** of information, wherein such information is used for efficient, trusted event management assuring the execution of one or more controls related to, including, for example... ...908 controlled or affected by such rights management information including, for example content objects or other information subject to such rules;

items 910 such as **metadata**, abstracts or the like that describe the things 908; and/or other information of any type.

Object classifier 902 classifies and/or selects things based... ...in this example can provide a variety of different outputs including, for example, some or all of the following:

matching information 920;

class hierarchies 962;

category definitions 922 and class definitions 970;

classified objects 908C;

audit records 964 indicating the results of classification, matching, and or selecting processes;

reports 966 indicating...Classification Utility System 900

The next section of the specification describes some example steps performed by the matching and classification utility 900.

Example Steps to **Categorize** Objects and/or Users and/or Appliances

Figure 18 shows example steps to **categorize** objects, and Figure 19 shows example steps to **categorize** users 95 and/or appliances 100. The overall categorization steps in these examples are -- at this level -- similar to one another. The processes begin by... methods may be used (Figure 18, block 1848; Figure 19, block 1848'). Next, the process assigns objects and/or users and/or appliances to the **categories** developed by the classification method that has been applied (Figure 18, block 1849; Figure 19, block 1849'). Finally, the process stores the results in electronic... of classification outputs produced by the Figure 21 process. In the Figure 22 example, information from several individuals has been used to create two example **categories** that reflect differing use profiles. More classes may have been defined than those example classes shown here. Users assigned to the same class have many...and classification utility 900 may also receive from one or more providers 2010 content objects 2003 themselves, for example, information in text format and/or **metadata** 2005 associated with content objects. Using at least one classification method, the matching and classification utility 900 may create at least one object class hierarchy, object class, object classification scheme, object **category** and/or object **category** scheme using at least some rights management information and assign at least one object to at least one **category** and/or class.

The matching and classification utility 900 takes the usage information and other rights management information received from the VDE nodes and/or other information sources and may create at least one **category** and may assign at least one node and/or user to a **category** and/or class. In Figure 47, the matching and classification utility 900 sends a VDE container 2002 to content provider 2010 with information showing the... such classification methods and procedures. The matching and classification utility 900 may create at least one object class hierarchy, object class, object classification scheme, object **category** and/or object **category** scheme using at least some rights management information and assign at least one object, item, and/or subscriber to at least one **category** and/or class.

Subsequent to receipt of the request and/or "subscribe" message from the customer 2053, the subject switch 2051 may query the matching...rights management information 2110 collected from DBN servers, for example, controls associated with the most frequently requested information, the matching and classification utility 900 creates **categories** of content (and/or services) and assigns DBN servers to one or more classes according to their specialization(s). The matching and classification utility 900 may create at least one class hierarchy, class, classification scheme, **category** and/or **category** scheme using at least some rights management information and assign at least DBN server and/or at least some information to at least one **category** and/or class.

For example, one DBN server may specialize in consumer sports information while another may specialize in legal information. DBN servers may specialize... ...that should be sent to one or more DBN servers 2104. Using this information, content providers 2102(1)-2012(n) then send content in these **categories** in VDE containers 2106 that match the **categories** of most frequently hit and/or consumed content on a DBN server 2104(1)-2104(n). (In another example, other information may be used as... ...For instance, the matching and classification utility 900 sends a VDE container 2112(2) to content source 2102(1) with instructions to send content in **categories** 1,11, and 15 to DBN server 1 (2104(1)). This content may, in turn, be sent to one or more consumers in VDE containers.... ...one DBN server.

Non-limiting example Figure 48 shows that the DBN 2100 may consist of video and/or audio content providers who send certain **categories** of video and/or audio content 2106 to DBN servers 2104(1) - 2104(n) based on the **categories** of content each server may specialize in, which, in turn, may be determined at least in part on frequency of usage and/or other rights... ...classification, matching, and selection). The matching and classification utility 900 sends VDE containers 2112 to content sources indicating that they should send content in specific **categories** 2106 to specific DBN servers 2104. In turn, each DBN server 2104(1) - 2104(n) delivers video and/or audio in VDE containers to parties.... ...and/or services of interest to a user and/or node. The classification method may also create at least one class hierarchy, class, classification scheme, **category** and/or **category** scheme using at least some rights management information and assign at least one service and/or at least some content to at least one **category** and/or class.

Subsequently, a VDE container 2308 may be sent to a provider 2302 with information indicating at least one class of content, services... ...come in part from the financial clearinghouse 200. The matching and classification utility 900 may also create at least one class hierarchy, class, classification scheme, **category** and/or **category** scheme using at least some rights management information and assign at least service and/or at least some content to at least one **category** and/or class.

In one example, using at least some VDE rights management data, for example, whether certain information can be viewed by anyone, by any employee, or only by employees in certain job classes, such as "manager," the enterprise matching and classification utility 900 creates one or more **categories** and assigns one or more employees and/or VDE nodes to one or more topic **categories**. These **categories** may, for example, indicate content and/or service topics, subjects, and/or content areas of potential interest to each employee and/or groups of employees.... ...sends to at least one external content and/or service provider 2404 on Internet 2402 one or more VDE containers 2424 with information that indicates **categories** of interest. The content providers 2404 may themselves be specialized; in one example, a content provider may specialize in general business and financial news while.... ...content and/or services.

The external provider may send at least one VDE container 2422(1) with content and/or rules and consequences and/or **metadata** about content and/or services to a content server internal to the enterprise. In another example, such VDE container(s) 2422(2) may be

sent... ...more groups of employees. The information sent by the external provider is tailored to, or in some way responsive to the content and/or service **categories** requested by the enterprise matching and classification utility 900.

In another example, the enterprise matching and classification utility 900 itself may be a distributed commerce.... assignments to a rights and permissions clearinghouse 400. The matching and classification utility 900 may also create at least one class hierarchy, class, classification scheme, **category** and/or **category** scheme using at least some rights management information and assign at least one rule to at least one **category** and/or class.

An authorized first creator 2604 may send a VDE container 2617 to the rights and permissions clearinghouse 400 asking for rules in.... consumer 2818, perhaps under the control of VDE. The matching and classification utility 900 may also create at least one class hierarchy, class, classification scheme, **category** and/or **category** scheme using at least some rights management information and assign at least one consumer, service, and/or at least some information to at least one **category** and/or class.

Example Figure 53 shows that a consumer 2802(1) has recently indicated a preference and/or interest in skiing, music, and flying.... and/or expiration times and/or dates for rights management information. The classification method may also create at least one class hierarchy, class, classification scheme, **category** and/or **category** scheme using at least some rights management information and assign at least one element to at least one **category** and/or class.

In turn, using the VDE aware appliance 3004, the stock trader 3006 sends a smart object 3012 to at least one information...may also return methods for executing the trade. The matching and classification utility 900 may also create at least one class hierarchy, class, classification scheme, **category** and/or **category** scheme using at least some rights management information and assign at least some trading information to at least one **category** and/or class.

The example trader 3102 examines the recommendation and sends VDE containers 3118 (A, B) with trade methods and control sets to a.... a pointer to a software object, in this case a Java applet, and perhaps other relevant information, such as VDE control sets and/or various **metadata** describing some aspect of the object, for example, what it does, what it costs, etc. The user may then elect to use the object or.... certain classes of hard goods, services, currency and financial instruments, and content. Travelers entering the United States, for example, are usually asked about currency (and **currency** equivalents) being brought into the **country** by the traveler. Children, for example, may be prohibited as a matter of law by governments from viewing content in the class "sexually explicit."

Another.... to the story class, in this case, an image of a dog.

The class assigned to each story may be carried in the container as **metadata** for one or more story objects in another example. An example Web browser may request of the

information provider an image appropriate to that class...the class "politics." The matching and classification utility 900 has also identified various subparts or subobjects and has classified each them into different classes or **categories**. In this example, the different classes represent different topic **categories**.

A user and/or other value chain participant may request only subobjects that have been **categorized** in one or more desired class(es). The desired subobjects may be packaged in a VDE container 4204 along with appropriate VDE controls for both... ...welfare" or "speeches US president defense."

Example: Matching And Classification Utility 900 Supports Classes Of Classes Based On Object Identifier Standards And/Or Other Object **Metadata**

Among the numerous advantages of the present inventions is the ability to create classes of classes based in part on rights management information. The feature may enhance search efficiency by enabling search engines to locate members of classes provided by any of numerous schemes for object naming and object **metadata** that have been proposed. For example, the IETF Uniform Resource Locator (URL), the International Standard Book Number (ISBN), International Standard Serial Number (ISSN), MARC library catalog records, and the recent proposed "Dublin Core"(Weibel, Stuart, Jean Godby, Eric Miller, and Ron Daniel, "OCLC/NCSA **Metadata** Workshop Report", URL [http://www.oclc.org:5047/oclc/research/conferences/metadata/dublin\(underscore\)core\(underscore\)report.html](http://www.oclc.org:5047/oclc/research/conferences/metadata/dublin(underscore)core(underscore)report.html)) are non-limiting examples of prior classifications that can themselves be classified using the present inventions.

Example 4300, Figure 68A-68B, shows several objects 4304(1)-4304(n) each of which may have associated with it various **metadata** 4302(1)-4302(n) that locates the object in one or more classes, non-limiting examples of which may include network address (URL), price, control set information, permission strings, subject **category**, title, and publisher.

In example step "1," object **metadata** 4302 is sent to a matching and classification utility 900 which (example step "2") may create new "classes of classes" 4306. These new classes 4306.... ...In example step "4" an interested party 4320 sends a VDE container with a request to retrieve the Web page 4308 with the classes of **metadata** information. The Web server (in example step "5") returns a copy of the page 4312 to the interested user 4320, who (in example step "6..."

Detailed Description:

...There is integration of the different components to effect creative treatment of a specific offer at a specific price linked to a customer 5 interest **category**.

The system also supports extranet reporting available to partners, and also the ability to dynamically, in real-time, remove out-of-stock or unprofitable offers...for setting targeting criteria and exclusion criteria. For example, targeting criteria may include the time, date, operating system, website, page group, domain, geographic location, interest **categories**, etc. of the users of the browsers. Exclusion criteria may include family filtering and other rules for keeping certain ads off of certain websites and...the system IO in future.

Thus, the system IO can tie into and use the available data tables and data 2 0 bases and capture **metadata**, and access a report writing tool for generating reports for administrators, such as reportage of statistics of usage determined according to venue.

The system IO...currency, and optionally along with the equivalent in U.S.

dollars. The selected currency may be user-selected, or may be determined by the 5 **currency local** to the product supplier, **local** to the country of the consumer receiving the ad banner, or local to the product displayed in the ad banner having a predetermined currency setting.... ...The system 10 may also implement a browse catalog function, in which an

on-line catalog is displayable having available product offerings structured by product **category** type. The ability of a user to browse acts as basic transaction enabled ads in the form of static offers, and also enhances the customer...such as sizing, color, and other attributes, as well as to create, update, and delete ads, to store links of such ads, and to store **metadata** about the ads.

Similarly, the system 1 0 may provide a Construct Ad function to pull together ad and order information from templates with graphics...be displayed, as well as to specify specific venues only where a particular ad may be displayed, and so venue of ads is controlled by **categories** of ads or venues, or by types or specified websites.

is The system 10 also supports functions for the set-up of cross-selling strategies.... ...product, such as supplier information, pricing, stock level maximums, current stock amounts, trigger stock levels, product name, product samples, product information, shipping 2 5 parameters, **metadata**, identified product managers, supplier contacts, fulfillment contacts, shipper information, and lead time to restock products.

The system also includes a setup and maintain product group... ...to create and update product infori-nation based on supplier price, with such infori-nation

including product names, group names, group information, group managers, and **metadata** about products and groups of products.

The system IO further includes a Dynamic Supplier Comparison function to provide the ability in a multi-supplier model...the targeting of ads and feedback on the transaction experience. Information may be monitored and reported, such as membership information, frequency of visits, preferences in **categories**, repeat business, tendency to cross-buy, geographic profiles, and usage such as click-throughs, transactions, and rain checks.

The system IO also performs a...

Yahoo! Opens Three World Auctions Services; Yahoo! Australia & New Zealand, Yahoo! Canada and Yahoo! UK & Ireland Introduce New Local Auctions

BUSINESS WIRE

May 13, 1999

SANTA CLARA, Calif.--(BUSINESS WIRE)--May 13, 1999--Yahoo! Inc. (Nasdaq:YHOO) today announced that it has rolled out its popular Yahoo! (R) Auctions (<http://auctions.yahoo.com>) service across three of its world properties - Yahoo! Australia & New Zealand, Yahoo! Canada and Yahoo! UK & Ireland.

The new services feature local auctions content along with access to

auctions from around the world, including the U.S. All auctions are free - there are no commissions or listing fees. Users can access the auctions at <http://auctions.yahoo.com.au> (Australia), <http://auctions.yahoo.co.nz> (New Zealand), <http://auctions.yahoo.ca> (Canada) and <http://auctions.yahoo.co.uk> (UK & Ireland). The launch marks the first time a globally integrated online auction service has been introduced in Australia & New Zealand.

Auctions Around the World

Through the new auctions sites, collectors, auction enthusiasts, or first-time bidders and sellers in Australia, New Zealand, Canada, the United Kingdom and Ireland can easily browse, buy, view or sell virtually anything at anytime - both locally and globally. From any Internet-connected computer, sellers can conveniently market items in the **local currency** to **regional** buyers or to a global audience. Buyers can access items available to them from across the world or search for things that only originate from their region. Additionally, the new auction sites provide users with easy access to a currency converter to help them quickly calculate foreign auction prices into their own **local currency**.

"Yahoo! continues to strive to be the single place on the Web that individuals need to go to find and connect with others who have similar interests - within their own area or around the world," said Mark Inkster, director of international operations at Yahoo!. "Yahoo! Auctions provides buyers and sellers in Australia, Canada, Ireland, New Zealand, the United Kingdom and the United States with a global marketplace to easily find relevant parties and conduct person-to-person transactions."

Yahoo! Charity Auctions Go Global
In keeping with the spirit started by Yahoo! Auctions in the United States, Yahoo!'s new global auctions have also launched Yahoo! Charity Auction programs within each region to help raise funds for various local charities. At launch, Yahoo! Canada is auctioning off an authentic Toronto Maple Leafs autographed team hockey stick to support the Multiple Sclerosis Society of Canada.

In Australia, users can support the Heart Foundation of Australia by bidding on a cricket bat signed by Don Bradman (the greatest Australian cricketer) or by bidding to play golf with the Wallabies (the Australian Rugby Union team). Users around the world can also participate in Yahoo!'s

charity auction for Kosovo to raise funds for the American Red Cross.

All

proceeds from the Yahoo! Charity Auctions Programs go directly to the non-profit organizations being supported.

To join in the fun and view thousands of ongoing daily auctions, Yahoo! users around the globe can go to any of the Yahoo! Auctions sites and browse an expansive inventory of collectibles, antiques, hard-to-find items and other merchandise. To bid on or list an item, users only need to register for one of the Yahoo! Auctions services. Registration is free and the services use the same universal registration process, user identification and password as the rest of Yahoo!'s communication and personalization services such as Yahoo! Mail and Yahoo! Finance.

First launched in the U.S. in September 1998, Yahoo! Auctions is a leading person-to-person interactive commerce marketplace offering convenient access to more than 2,000 diverse buying and selling **categories** such as: Arts & Entertainment, Toys & Games, Antiques & Collectibles, Electronics & Cameras, Computers, Sports, & Recreation, and Home & Garden. As an integral part of Yahoo! Auctions, Yahoo! Charity Auctions is a free service dedicated to the ongoing support of non-profit organizations around the world and is an ideal forum to raise awareness of important causes to Yahoo!'s growing global community.

About Yahoo!

Yahoo! Inc. is a global Internet media company that offers a branded network of comprehensive information, communication and shopping services to 60 million users worldwide. As the first online navigational guide to the Web, www.yahoo.com is the leading guide in terms of traffic, advertising, household and business user reach, and is one of the most recognized brands associated with the Internet.
